

Gel-One[®]
Cross-linked
Hyaluronate

A single 3mL injection.
It's amazing what a little gel can do.

Preserving Quality of Life

Gel-One® Cross-linked Hyaluronate is an early-intervention treatment designed to help patients who suffer from osteoarthritis of the knee regain their active lifestyles. *Gel-One* Hyaluronate is a natural supplement to synovial fluid, providing pain relief and improved knee function.

Single-injection Convenience

Gel-One Hyaluronate requires just one office visit for a complete, simplified single-injection treatment.

Lower Treatment Volume

Unlike other viscosupplement treatments, highly purified *Gel-One* Hyaluronate requires only 3mL for safe, effective and complete treatment.

Gel-One Hyaluronate
Innovative cushioning gel.
Single injection simplicity.

No reported Pseudosepsis

Pseudosepsis, or severe acute inflammatory response, is a rare but serious concern with some viscosupplement treatments. *Gel-One* Hyaluronate had no reported incidences of pseudosepsis in the premarket clinical study.

Important Safety Information

Before using *Gel-One* Hyaluronate, tell your doctor if you are allergic to hyaluronan products, cinnamon, or products from birds such as feathers, eggs, and poultry. *Gel-One* Hyaluronate is only for injection into the knee, performed by a doctor or other qualified health care professional. You should not receive a *Gel-One* Hyaluronate injection if you have a skin disease or infection around the area where the injection will be given. *Gel-One* Hyaluronate has not been tested to show pain relief in joints other than the knee and for conditions other than OA. *Gel-One* Hyaluronate has not been tested in patients who are pregnant, mothers who are nursing, or anyone under the age of 21. You should tell your doctor if you think you are pregnant or if you are nursing a child. Talk to your doctor before resuming strenuous or prolonged weight-bearing activities after treatment. The safety and effectiveness of repeat treatment cycles of *Gel-One* Hyaluronate have not been established. The side effects most commonly seen after injection of *Gel-One* Hyaluronate in the clinical trial were knee pain, swelling, and/or fluid build-up around the knee. These reactions are generally mild and do not last long. Other conditions, including but not limited to skin redness and rash, knee stiffness, knee muscular weakness and dizziness, were also reported rarely. If any of these symptoms or signs appear after you are given *Gel-One* Hyaluronate or if you have any other problems, you should call your doctor.

Indications For Use

Gel-One Hyaluronate is indicated for the treatment of pain in osteoarthritis (OA) of the knee in patients who have failed to respond adequately to non-pharmacologic therapy, non-steroidal anti-inflammatory drugs (NSAIDs) or simple analgesics, e.g., acetaminophen.
